**Project:** Physical Environmental Impacts of Pipeline Construction and Operation, Offshore Eastern Florida

**Contact:** ENTRIX, Inc.  
Wilmington, DE  
Dave Durofchalk; (302) 395-1919

Applied Coastal personnel were asked to review and summarize existing conditions and evaluate the potential environmental impacts of proposed pipeline construction and operation offshore the east coast of Florida. Our analysis will rely on existing literature and data. Applied Coastal personnel are evaluating information on the geology and physical processes associated with Florida coastal and offshore environments. The information will be used to supplement the existing environment sections for a third-party EIS FERC document. The existing environment information will then be used to evaluate the environmental consequences of proposed pipeline construction activities and operation.
